

Dear Professor Hurley,

Thank you again for the opportunity to revise our manuscript entitled “RFpredInterval: An R Package for Prediction Intervals with Random Forests and Boosted Forests” [RJournal 2021-111].

We have checked the version of the style file and wrapper, and we are using the most recent version available at <http://journal.r-project.org/submissions.html>. In R, we have used `tools::texi2pdf()` to generate the “RJwrapper.pdf” file, which was compiled without any errors.

We have proofread our article according to the checklist at <http://journal.r-project.org/share/proofreading-checklist.pdf>. We have gone through every item on the checklist and fixed the issues.

We hope that you will find this version satisfactory.

Sincerely,

Cansu Alakus
